IMIC

[Mexican Institute of Clinical Research]

EXCELLENCE

Mission

The Mexican Institute of Clinical Research (IMIC) has been created with the specific purpose of conducting high quality clinical research in Mexico. IMIC meets all local and international regulatory requirements and has been modeled after the most successful freestanding research centers in the United States.

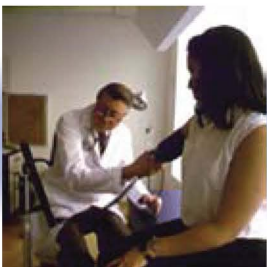

Experience

IMIC founders have over 15 years of clinical research experience. All of IMIC's coordinators and investigators are highly qualified. IMIC's coordinators (nurses and physicians) have been trained at active research centers within the United States and Mexico.

IMIC adheres to the highest standards in clinical research by strictly complying with Good Clinical Practice (GCP) and International Conference on Harmonization (ICH) guidelines. A large and highly motivated patient population allows for the establishment of a perfect base on which to build an exceptional clinical research organization.

IMIC's personnel participate in ongoing educational programs both in house and externally. All IMIC employees are full-time and 100% bilingual. Indeed, progress notes and case report forms (CRF's) are completed in English.

PERFECTION

Patient Enrollment & Therapeutic Areas

IMIC has the ability to utilize the large and untapped population in Mexico to quickly identify appropriate subjects and rapidly enroll them. There are over 22 million people living in the greater Mexico City area alone. Currently IMIC has over 10,000 patients in its database.

IMIC's staff is experienced in conducting all phases of clinical research and capable of filling trials in the following Therapeutic Areas:

- Cardiology / Vascular Diseases
- Dental / Maxillofacial Surgery
- Dermatology
- Endocrinology including Diabetes & Obesity
- Gastroenterology including Liver Disease
- Hematology
- Immunology / Infectious Diseases
- Musculoskeletal including muscle strain
- Nephrology / Urology
- Neurology / CNS
- Obstetrics / Gynecology
- Oncology
- Ophthalmology
- Otolaryngology / Ear, Nose & Throat
- Pediatrics / Neonatology
- Psychiatry / Anxiety and Depression
- Pulmonary / Respiratory Diseases
- Rheumatology
- Women's Health
- Devices

QUALITY

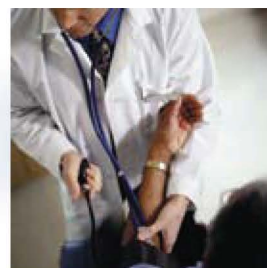

EXPERIENCE

Facility

Our corporate headquarters are located at 216 Durango Street in the historical suburb of Colonia Roma in Mexico City. Colonia Roma, a transportation hub, is located near the finest hotels, restaurants and museums Mexico City has to offer. Our building has been designated a historic site in Mexico City and has been extensively renovated to facilitate clinical research. However, the charm and ambience of the structure has been retained allowing for a remarkable blend of old and modern.

IMIC's site features the following in-house facilities:

- Eight fully equipped Research Offices, each one staffed by a study coordinator.
- A secure and fully staffed Pharmacy.
- A Clinical Laboratory for sample collection.
- A well-trained and efficient Patient Outreach and Recruitment Department.
- An Education Department, with in-house training programs.
- A fully certified Translation Department.

Investigators

IMIC Investigators have been selected according to their specialty and experience. All IMIC investigators are bilingual with ample experience in clinical research, fully trained on GCP, ICH and local guidelines.

Publication

IMIC's Publication Department is responsible for local and international contribution to various industry journals, providing the latest information on health and medical research in Mexico.

Regulatory & Quality Assurance

A Regulatory Department, which facilitates the submission and approval to:

- IRB, the first Independent IRB in Mexico
- Ministry of Health (MoH)
- Customs, for the importation of the study drug

IMIC's Quality Assurance department is responsible for ensuring and maintaining strict protocol adherence, quality, and full compliance of local and international standards throughout the study.

Affiliations & Alliances

• IMIC's affiliations include:

The National University of Mexico (UNAM)

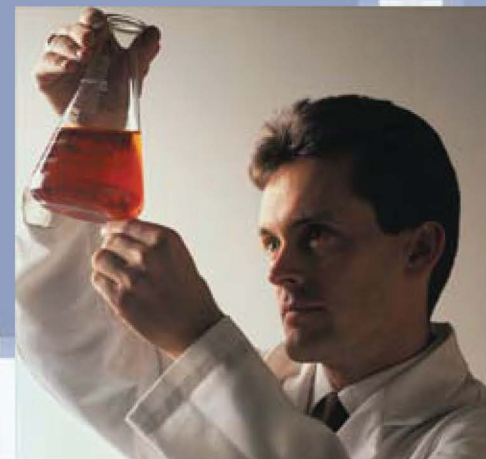

Anáhuac University

Children's Hospital Federico Gómez

National Institute of Oncology

REPUTATION

EFFICIENCY

Mexico's Demographics

Mexico offers a vast population of naive patients in most therapeutic areas. Enrollment of subjects in clinical trial has exceeded enrollment expectations in the majority of trials conducted in Mexico. The majority of investigators conduct clinical trials in government sponsored academic institutions with large captive patient populations. We have been successful in creating synergism between these centers and IMIC; taking clinical research to a new dimension of quality and professionalism in Mexico.

The majority of the Mexican population is concentrated in Mexico City with over 22 million, Guadalajara, Veracruz and León follow with a population of 4 to 6 million each. Finally Acapulco, Monterrey and Tijuana with a population of 2 to 3 million each.

Conclusion

In conclusion, consider placing a portion of your next trial in Mexico. Our experienced staff, proximity to the United States, excellent patient population and meticulous approach to clinical research will allow your project to proceed in a manner that will claim your confidence and maximize success in clinical trials.
